e-Security

How Safe Are You?

We deliver intelligent business solutions to your organisation.

UNDERSTANDING E-SECURITY

Gartner Group's recent research indicates that 50 percent of corporate enterprises that use the Internet

for more than e-mail and handle their own security, will experience a successful internet attack -- be it web site hacking or a virus attack. Researchers also predict that 60 percent of those enterprises will be unaware of the attack.

James Browning, a Gartner research director, warns, "With small and midsize enterprises doing more business on the Internet, their networks are exposed to security breaches. Defensive action is required to protect the enterprise from unauthorized and malicious users."

CONSULTANCY SERVICES

At b2Lateral, our services are not standardised for our clients. Unlike many other security consultancies and ISPs, we do not expect a one size garment security solution to fit all. We will tailor your security solutions to meet your specific business and financial goals.

We will help you achieve a bespoke solution by carrying out a complete security audit of your network. This will ensure that you have a security policy that is easy to understand and one that reflects your business criteria and goals.

b2Lateral has a team of security consultants that have expertise in all aspects of IT security. Our professional attitude ensures that nothing is taken for granted when it comes to your security. We will help you provide the appropriate security policies and training to suit your current working environment.

Consider possibilities with b2Lateral's unique [e-Security framework](#).

b2Lateral SECURITY FRAMEWORK The Secure Solution for your Business

The core component of our solution is based on Firewall Protection, Proxy Solutions, Intrusion Detection, Penetration Testing Tools, Network Traffic probing/monitoring, Content Filtering, and VPN solutions using software from Microsoft, Novell, CheckPoint, Cisco, and other reputable security software vendors.

We offer the following services to keep you secure.

- e-Security Implementation
- e-Security Auditing
- e-Security Training
- Penetrating testing services
- Threat monitoring & Systematic Vulnerability Analysis

With the advent of technology, sharing information has become easier than ever. Information can easily flow from your local network to your remote and international users.

b2Lateral security experts will ensure that it does not flow into the wrong hands or your competitors.
